Synthetic population
ENPG × CASEN, 15–64 y
1. Record population
and alcohol exposure
Prevalence by state and HED;
BIs delivered
2. All-cause mortality
reference rates, all scenarios
Died
3. Attributable deaths and
YLL avoided: D_ref × PIF†
Exit
Alive
4. Age +1 year
exposure held from 65 y†
Oldest reach age 73 by 2034
INE stocks
sex × age × year
Entrants
5. Reconciliation to INE
stocks, ages 15–64 y
6. Next-year exposure, ages 15–64 y
6a Transitions†
EPS and TSM
6b Grams/day
within state
6c DIR cascade†
REM-calibrated
6d BI effect†
new BIs only
6e HED†
volume + latent
6f Recode
N0 to C3+
Scenarios S1–S3 differ from S0 only in steps 6c–6d; S0 is calibrated to ENPG margins.
Next year
Estimated or calibrated with Chilean data
External parameter or modelling assumption
