Data inputs
1 Population
ENPG × CASEN, 15–64 y
INE stocks (reconciliation)
2 Alcohol exposure
Transitions from EPS and TSM
HED persistence, TSM-informed
3 Mortality
DEIS reference deaths
Relative risks by cause
4 DIR programme
REM 2024 cascade, by sex and age
BI effect and its duration
5 Scenarios
S0 status quo (2024) · S1 screening ×1.5
S2 brief intervention 80% · S3 S1 + S2
Simulation
Annual cycle
2025–2034
Virtual population
ageing
drinking
DIR
mortality
Model outputs
Exposure
Prevalence by state and HED; vs ENPG 2026 or ENCAVI 2023–24
Mortality
Attributable deaths avoided, by cause
Years of life lost
YLL avoided (life table)
Programme volume
Screens and BIs; YLL avoided per 1,000 BIs
Chilean data
External parameter or assumption
